

JULIUS BALTAZAR AYUNO

AI Automation Engineer | LLM Integrations, AI Agents, n8n & Workflow Automation

Davao City, Philippines | +63 991 575 4131 | jbayuno.work@gmail.com | juls-solutions.vercel.app | linkedin.com/in/solutionswithjuls

PROFESSIONAL SUMMARY

AI automation engineer who puts LLMs to work inside real business operations. Integrated OpenAI and Anthropic's Claude into a production payroll and finance system for a remote US company of 90+ people, automating data-export parsing, tiered commission and expense calculations, and report generation. Built agentic n8n workflows, including a meeting action-tracking agent, and an AI finance assistant on the company's HRIS and payroll data. Builds the systems underneath too: databases, Apps Script, Next.js, Python, and REST APIs, developed daily with Claude Code. OpenAI Academy certified in AI Foundations, Applied AI Foundations, and Agents and Workflows.

CORE COMPETENCIES

- **LLM integration:** OpenAI API and Anthropic Claude API connected to production systems through REST APIs.
- **AI agents & workflows:** n8n agentic workflows on Docker, a Fathom meeting agent, and an AI finance assistant.
- **Prompt engineering:** prompts for data parsing, calculations, and report generation in a live finance system.
- **AI-assisted development:** Claude Code with CLAUDE.md system briefs, ChatGPT, LangChain and LangGraph (foundational).
- **Data foundations:** database design, Supabase (PostgreSQL), SQL, and data cleaning that make AI output reliable.

CERTIFICATIONS

- **AI Foundations**, OpenAI Academy (June 2026) | Credential ID: [zvdn12xg50](#)
- **Applied AI Foundations**, OpenAI Academy (June 2026) | Credential ID: [3eb8n6p8ki](#)
- **Agents and Workflows**, OpenAI Academy (June 2026) | Credential ID: [yqj72za2qd](#)

EXPERIENCE

Independent Solutions Engineer (Freelance)

Sep 2026 – Present

Self-employed · Remote, based in Davao City, Philippines

- Design and build custom business systems for clients end to end: scheduling and booking tools, structured databases, inventory and record tracking, automation, and reporting dashboards.
- Led discovery for a clinic management system pitched to a three-branch dental clinic in Davao: competitive analysis against local products, a phased build-and-retainer pricing model, and a working prototype deployed on Netlify, with Data Privacy Act (RA 10173) compliance built into the scope.

Lead Automation Engineer (official title: Lead Automator)

Apr 2025 – Sep 2026

Aruna Talent LLC · Remote · US-based talent and creator management agency

- Integrated OpenAI and Anthropic's Claude APIs into the production finance system to automate data-export parsing, tiered commission and expense calculations, and report generation.
- Built agentic AI workflows in n8n, self-hosted on Docker behind Caddy, including a meeting action-tracking agent that works from Fathom recordings.
- Developed an AI finance assistant for leadership, built on the company's HRIS and payroll data.
- Wrote AI-ready knowledge-transfer documentation (CLAUDE.md system briefs) so internal systems could be maintained and extended with AI coding agents such as Claude Code.
- Single-handedly built a full HRIS and payroll system from scratch, engineering the database structure and payroll logic in Google Apps Script, Google Sheets, and JavaScript, then extending into Supabase (PostgreSQL) and SQL as it grew; it carried the company from ~20 to 90+ employees without a rebuild.
- Engineered event-driven automation with Apps Script installable triggers, Slack webhooks, and REST API calls, so new records, status changes, and sign-offs reached the right people without manual follow-up.
- Automated tiered commission, expense, and payout calculations from raw data exports, including data cleaning and deduplication, cutting manual processing time and errors every pay cycle.
- The system's success led the company to fund a dedicated dev team to rebuild it as a full web app on the original foundation. Shifted from solo builder to supervising and consulting that team, owning validation and user acceptance testing (UAT) end to end through production launch while the original system kept running live in parallel.
- Mapped the company's foundational processes and surfaced redundant, overlapping work and roles; the resulting changes saved about \$8,000 per month (~\$96,000 a year).

Quality Analyst & Operations Support

2023 – 2025

Creator management agencies (Europe, US & Germany) • Remote

- Supervised training and quality assurance for client-facing operations across distributed, remote teams.
- Managed operational and marketing tools, keeping day-to-day workflows running smoothly for international clients, and handled sensitive information discreetly.

Customer Service Representative

2022 – 2023

iQor Philippines • Two separate employment periods (1-800-Flowers, then Walmart)

- Walmart account (voice, email, and chat): supported US customers across all three channels, resolving issues accurately with clear, professional communication.

INTERNSHIP

On-the-Job Trainee, Planning Department

2026 – Present

Department of Trade and Industry (DTI) Region XI • Davao City

- Built and deployed PRISM, a data platform for DTI Region XI: form engine and forms catalog, office data entry and summaries, Excel import and export, office administration, and office-scoped audit logs (Next.js, Supabase with row-level security, Drizzle, ExcelJS).

PROJECTS

- **TheBook** (Next.js, Supabase, Drizzle, Stripe, Resend): Double-entry accounting and invoicing platform for freelancers and small businesses, live in production: general ledger, Stripe online payments, bank and QuickBooks CSV import, P&L, balance sheet, and cash flow reports, and multi-org tenant isolation with row-level security. Live at thebook-iota.vercel.app.
- **Agency Time Tracker (v1 in progress)** (Electron, Next.js, Prisma, Neon Postgres, Clerk, Turborepo): Billing-first, multi-tenant time tracker for remote agencies (a Hubstaff and Time Doctor alternative): a Windows desktop agent plus timesheets that flow into client invoices and profitability reports, with transparent opt-in monitoring.

TECHNICAL & PROFESSIONAL SKILLS

- **AI & automation:** OpenAI API and ChatGPT, Anthropic Claude API and Claude Code, n8n agentic workflows, prompt engineering, AI agents, LangChain and LangGraph (foundational), Ollama
- **APIs & DevOps:** REST APIs, webhooks, Stripe (Checkout, Connect), Clerk, Resend, Git, Docker, Caddy
- **Languages:** JavaScript, Python, SQL, Google Apps Script, HTML/CSS, R
- **Frameworks & platforms:** React, Next.js (App Router), Node.js, NestJS, Vite, Electron, Turborepo, Vercel
- **Databases & data layer:** Supabase (PostgreSQL, Auth, row-level security), Neon Postgres, Prisma, Drizzle ORM, SQL, multi-tenant schema design
- **Hardware & prototyping:** Arduino (basic projects), Tinkercad circuit design and simulation, electrical engineering fundamentals

EDUCATION

BS Information Technology, major in Business Technology Management

Expected April 2027

University of Southeastern Philippines (Obrero Campus) • Davao City

- Shifted from BS Electrical Engineering at USEP after three years of coursework, bringing an engineering and quantitative foundation into IT and business systems.
- Relevant coursework: Application Development, Information Systems, Databases, Business Analytics (R), Financial Accounting & Bookkeeping, Networking (VLANs, ACLs, AAA).

Senior High School, STEM Strand (Science, Technology, Engineering, and Mathematics)

2019

Assumption College of Davao • Davao City
